Field Studies

Bridging the Watershed is a successful field study program that engages students in learning about natural systems and the role they play in our world. This year, participants will have the opportunity to explore a variety of ecosystems, including forests, wetlands, and coastal areas. The program includes hands-on activities, such as collecting and analyzing water samples, and interactive lectures that explain the science behind the systems. Students will also have the chance to work with experienced educators and scientists to develop a better understanding of their role in protecting the environment.

Teacher and Ranger Training

Bridging the Watershed offers a range of training opportunities for educators and park rangers. The Teacher Training Program provides educators with the tools they need to incorporate field study activities into their classroom curriculum. Rangers can participate in the Ranger Training Program to gain a deeper understanding of the natural systems they manage. Both programs include field trips, workshops, and online resources to help participants enhance their knowledge and skills.

Special Opportunities

Bridging the Watershed offers several special opportunities for participants. The Teacher Ranger Hosted Program provides educators with the opportunity to host a Ranger for a day, allowing them to experience first-hand the role of a park ranger. The Education Program offers workshops and seminars on topics such as environmental education and natural resource management. Additionally, the Program offers internships and volunteer opportunities for those interested in gaining hands-on experience in the field.

Classrooms to Parklands

Bridging the Watershed recognizes the importance of connecting students with nature and the land. The Classroom to Parklands Program encourages educators to bring students to Bridging the Watershed for field study activities and provides guidance on how to make the most of the experience. This program helps educators create a seamless link between the classroom and the natural world, empowering students to become stewards of the environment.

Service Projects

Bridging the Watershed offers opportunities for participants to make a difference in their communities. The Service Projects Program encourages individuals and organizations to participate in projects that benefit the environment. This program includes opportunities to clean up local parks, plant native species, and engage in other activities that promote environmental stewardship.
